WURM 05-01-2026 13:00 CET WURMng Marjo's office

Mark: GPU server switched off over holiday period, can be turned on?
sfxc test cluster: some tests fail: SLURM prob combined w/ some data
missing [Paul: can take from split-mirror disk]. Currently MPC has
prio, created git repo + module, MVP is there but want to implement
2nd strategy this month, then write up.

Wybren: fix/check LDAP for Nextcloud. w/ Bob looked at POLARIS,
requires postgres 14 (current: 18), likely for a particular plugin.
fb21 broken disk → replaced, same error → old disk in USB dock = ok.
try again on machine slot. Need to send tripreport. Working on new
test server for db0. Keycloak needs to be updated.

Paul: WR in RI paper published on Sat 3 Jan 2026 (Congrats!).
Rebuilding gluster on sfxc test cluster for SWEEPS team. Using ACL
can prevent SWEEPS staff seeing home dirs (turned out to be not
complex, works great); ACL needs to be created on NFS server (b/c w
run v3) [MK: how about a stepping stone into the system?] Yes, 's on
the list. GiuseppeC wants new Marcopolo but big price jump; needs
decision: disks or machine?

Aard: first bug fix of the year, in sfxc2mark4 (Lim's geo stuff →
one letter geo mapping to two lettercode was not migrated).
Implementation for coherent dedispersion done, next up is
integrating into correlator.

Bob: rebalancing tools, internal move (within a flexbuff) ready to
be installed; working on auto-fb transfer to reuse rebalancing
across own fb's. [WB: noticed any prob w/ sleeping disks on fb22?]
No, all ok (note: fb22 is running Deb 13 + SATA disks). w/ Benito:
going over Meerkat proposal tool keycloak use: PI can add members to
own team. [MK: keycloak group mgmt protocol standardized? eg RFC or
OpenAPI?] Unknown. MislavB leave overview login prob solved:
identity Python pkg newer vsn installed and now using proper venvs;
Wybren prob (packet too long) uwsgi message length set too short.
POLARIS deployment: use procedure to build own server: git tag
triggers rebuild of docker / deployable target. e-shipping w/
Socorro: will be doing more than previous session: some disk packs
were sent but not all.
